Nike Marketplace Project: Full Documentation (Days 1–6):

Overview:

The **Nike Marketplace** is an e-commerce platform aimed at empowering small businesses and individuals by providing a seamless and secure online shopping experience. Over the course of six days, the project evolved from brainstorming ideas to deploying a staging environment. Each day introduced specific tasks that contributed to the overall development.

Day 1: Conceptualization and Marketplace Design:

Key Achievements:

Defined the marketplace type as a general e-commerce platform for **Nike** products.

Business Goals:

Promote small businesses and entrepreneurship.

• Provide a platform to easily buy/sell **Nike** products online.

Data Schema Design:

Entities: Products, Orders, Customers, and Delivery Zones.

Relationships:

Customers place orders that reference products.

• Delivery zones are assigned to drivers for fulfillment.

С

Day 2: Technical Planning:

Tech Stack:

Frontend: Next.js with Tailwind CSS for styling.

Backend: Sanity CMS for content management.

• APIs: ShipEngine for order tracking and Stripe for payment processing.

API Requirements:

Product management: /products, /product/:id.

• Orders: /orders (POST) and /shipment/:id (GET).

Deployment Plan:

o Frontend on Vercel and backend on AWS Lambda with serverless architecture.

Day 3: Data Migration

Key Achievements:

Custom Migration Code:

Data from Sanity CMS was migrated to Next.js using GROQ queries.

• Example GROQ Query: *[_type == "product"] {title, description, price, image}

Schema Definition:

• **Products** schema included fields for title, id description, price, and image.

Client Integration:

o Fetched and displayed data dynamically on the homepage.

Day 4: Building Dynamic Frontend Components

Key Achievements:

Dynamic Product Listings:

• Created a ProductList component to display **Nike** products dynamically fetched from Sanity.

Filters and Sorting:

Implemented filters for categories and price ranges.

• Sorting options included price and popularity.

Reusable Components:

ProductPage: Displayed product images, titles, and prices.

Day 5: Testing and Backend Refinement					
Key Achievements:					
Testing Types:					
Functional Testing:					
 Verified workflows like product listings, cart operations, and API interactions. 					
Performance Testing:					
 Used Lighthouse to analyze load times and responsiveness. 					
Security Testing:					
 Validated input fields, secure API keys, and HTTPS implementation. 					
Day 6: Deployment Preparation and Staging Environment Setup					
Key Achievements:					
Deployment Strategy:					
Hosted the application on Vercel for quick deployment.					
• Integrated GitHub repository for CI/CD.					
• Integrated GitHub repository for CI/CD. Environment Variables:					
Environment Variables:					
 Environment Variables: Configured sensitive variables (e.g., API keys) in .env and uploaded them securely to Vercel. 					
 Environment Variables: Configured sensitive variables (e.g., API keys) in .env and uploaded them securely to Vercel. Staging Environment: 					
 Environment Variables: Configured sensitive variables (e.g., API keys) in .env and uploaded them securely to Vercel. Staging Environment: Deployed a staging build to validate functionality in a production-like environment. 					
 Environment Variables: Configured sensitive variables (e.g., API keys) in .env and uploaded them securely to Vercel. Staging Environment: Deployed a staging build to validate functionality in a production-like environment. 					
 Environment Variables: Configured sensitive variables (e.g., API keys) in .env and uploaded them securely to Vercel. Staging Environment: Deployed a staging build to validate functionality in a production-like environment. 					
Environment Variables: • Configured sensitive variables (e.g., API keys) in .env and uploaded them securely to Vercel. Staging Environment: Deployed a staging build to validate functionality in a production-like environment. Example .envFile:					
Environment Variables: • Configured sensitive variables (e.g., API keys) in .env and uploaded them securely to Vercel. Staging Environment: Deployed a staging build to validate functionality in a production-like environment. Example .envFile: NEXT_PUBLIC_SANITY_PROJECT_ID=your_project_id					

Staging Testing:

Functional Testing: Verified key workflows like product listings and checkout.

Performance Testing: Used GTmetrix for analyzing speed and responsiveness.

• Security Testing: Validated HTTPS, input handling, and secure API calls.

Conclusion:

Over the six days, the Nike Marketplace project progressed from concept to deployment, integrating robust features and ensuring a seamless user experience. With a well-structured GitHub repository, dynamic components, and comprehensive testing, the project is now ready for live deployment in a production environment.

The next steps include:

- 1. Addressing any unresolved issues documented in the staging tests.
- 2. Monitoring the live environment for user feedback and performance metrics.
- 3. Scaling the platform to include advanced features like multi-language support and predictive analytics.

This marks the successful completion of the Nike Marketplace hackathon project!
